MISSOURI BOTANICAL GARDEN

Mackinaw Ills 11/21  
Dr. George Engelman

Dear Sir:

By mail this day I  
send you some grape  
wood & the fruit that  
grows on it. They grow  
wild here on the bottom  
of the Mackinaw Creek.  
Will you kindly tell  
me the true botanical  
name of it -

There is another variety  
growing here that has  
white wood, downy, a  
flat square growth.  
very strong grower. The  
fruit is smaller more  
thickly set on the bunch  
than the sample I send.  
Ripens about same time.

BOTANICAL  
GARDEN

Can you name this by  
the description? It is  
very distinct from any  
other wild variation here  
& is quite plenty in the  
woods -

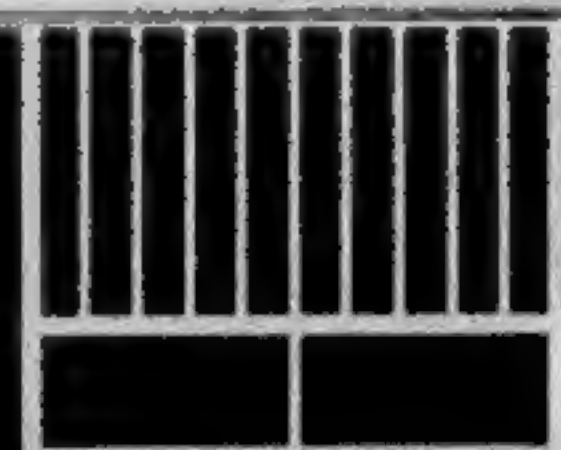

Hoping you will find  
time to reply
